STANDARD OPERATING PROCEDURE & TECHNICAL MANUAL

ECOMXSTOCKS PLATFORM

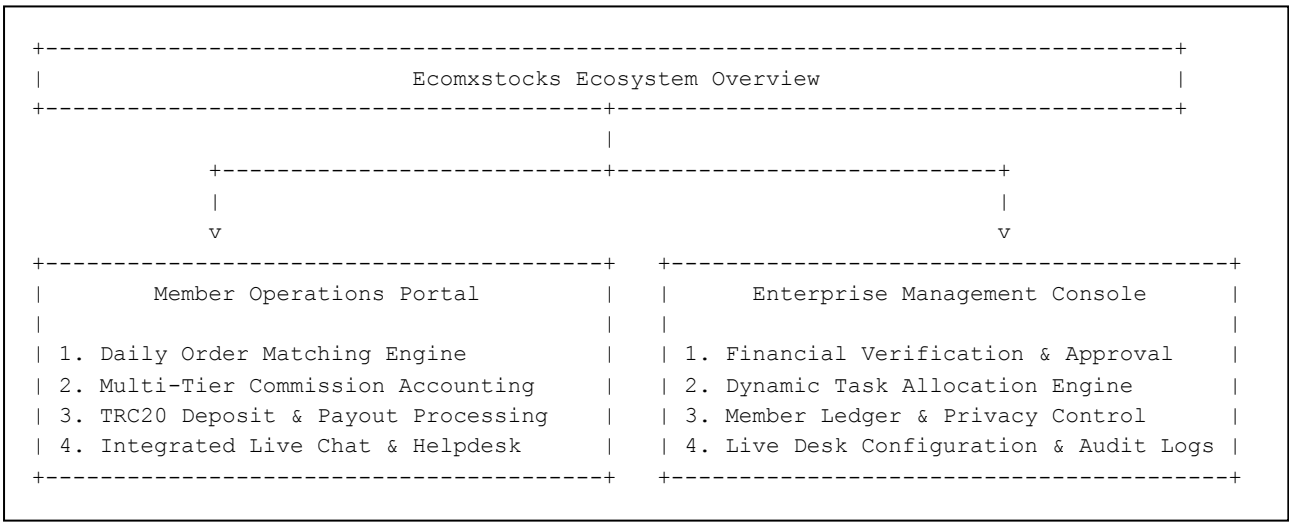

A Complete Operational Guide for Client Leadership, System Administrators, and Support Desks

Document Identifier: SOP-ECS-2026-V2	**Effective Date:** October 2026	**Classification:** Confidential / Operations
Portal URL: https://ecomxstocks.com/	**Settlement Standard:** USDT (TRC20)	**Security Standard:** PIN-Enforced Authentication

1.0 SYSTEM ARCHITECTURE AND BUSINESS SCOPE

The Ecomxstocks platform is an enterprise-grade digital performance marketing and merchant optimization ecosystem. The platform serves as an operational bridge connecting global marketplace merchants (operating across eBay, Walmart, and Temu) with an international network of verified members. Members perform listing reviews, rating optimizations, and inventory validations that directly enhance product visibility and sales velocity.

The system is delivered as a zero-installation, responsive web application compatible with all mobile browsers (Apple iOS Safari, Google Android Chrome) and enterprise desktop workstations. All financial settlements are conducted in Tether (USDT) on the Tron TRC20 network, chosen for immediate transaction finality, cryptographic transparency, and minimal overhead network fees.

2.0 MEMBER OPERATIONS AND USER LIFECYCLE

2.1 Registration and Authentication Protocol

1. The user accesses the portal at **`https://ecomxstocks.com/`**.
2. Select **Sign Up** or **Start Today** from the navigation menu.

3. Provide required identification fields: Full Name, Active Email Address, Account Password (minimum 6 alphanumeric characters), and a 4-digit Security PIN.
4. The 4-digit Security PIN is permanently bound to the user profile and is required to validate capital disbursements and withdrawals.
5. Upon submission, the user profile is provisioned immediately with access to the member dashboard.

2.2 Account Dashboard and Tier Structure

The member interface presents three key operational metrics:

- **Available Balance (USDT):** Active operating funds eligible for task engagement and withdrawal.
- **Today's Profit (USDT):** Accumulated yield earned within the current 24-hour accounting cycle.
- **Task Progress Meter:** Real-time completion counter tracking daily allocation (example: 14 of 25 Tasks Completed).

TIER DESIGNATION	CAPITAL REQUIREMENT (USDT)	ASSOCIATED MARKETPLACE	COMMISSION YIELD RATE
Tier 1 (Silver)	$0.00 to $499.00	eBay Merchant Listings	4.0% per verified task
Tier 2 (Gold)	$500.00 to $899.00	Walmart Wholesale Listings	8.0% per verified task
Tier 3 (Platinum)	$900.00 and above	Temu Direct Inventory	12.0% per verified task

2.3 Task Execution and Yield Calculation Workflow

1. The member initiates work by selecting **Start Tasks** or **Grab Next Order** on the dashboard.
2. The algorithm retrieves an active product order matching the member's current tier, detailing retail valuation, merchant credentials, and projected commission.
3. The member inspects the specifications and clicks **Submit Rating / Optimize Order**.
4. The server performs cryptographic validation and listing signal registration.
5. Upon validation, both the principal order value and the earned commission rate are credited directly to the member's withdrawable wallet balance.

2.4 Progressive Learning Curriculum (Milestones 1 to 25)

To ensure procedural compliance, initial member accounts may be placed into a structured 25-step learning sequence:

- **Step 1 (Introductory Tutorial):** Introduces verification mechanisms with an entry-level deposit barrier of $10.00.
- **Steps 2 to 24 (Intermediate Proficiency):** Broadens operational familiarity across diverse categories, prices, and yields.
- **Step 25 (Graduation Milestone):** Final tutorial stage requiring a $300.00 deposit barrier, after which the account transitions to standard VIP package allocations.

2.5 Security Collateral and Deposit Barriers

When an assigned high-valuation merchant order requires capital exceeding the member's active wallet balance, the system engages a mandatory deposit barrier:

> **SYSTEM MECHANISM: DEPOSIT BARRIER NOTICE**
>
> The member interface notifies the operator that the order value exceeds current liquidity. To prevent inventory allocation failure, the member deposits the shortfall via USDT TRC20. Once verified by administration, the order proceeds, and the entire principal deposit along with the full commission is credited directly into the member's withdrawable balance.

2.6 Cryptocurrency Deposit Protocol (USDT TRC20)

1. Navigate to **Deposit** within the interface header or wallet drawer.
2. The interface outputs the verified platform TRC20 depository address along with a scannable QR code.
3. The member executes a transfer through any external exchange or private wallet (e.g., Binance, OKX, Trust Wallet, Bitget, Bybit) strictly over the TRC20 network.
4. The member enters the transferred amount and pastes the blockchain Transaction Hash (TxID).
5. Click **Submit Deposit For Verification**. The request transitions to Pending status until reviewed by operations.

2.7 Daily Quota Renewal Procedures

Upon concluding the daily quota of 25 tasks, the dashboard indicates `Daily Quota Complete (25/25)`. Members request additional allocations by selecting **Request New Task Package**, which dispatches a notification to the operations administrative console.

2.8 Capital Disbursement and Withdrawal Processing

1. Navigate to **Withdraw** on the dashboard.
2. Specify the requested disbursement amount in USDT.
3. Paste the personal receiving USDT TRC20 wallet address.
4. Input the confidential 4-digit Security PIN established during registration.
5. Select **Confirm Withdrawal Request**. The system records the request for operational review and blockchain payout.

3.0 ADMINISTRATIVE GOVERNANCE AND CONTROL CONSOLE

3.1 Console Authentication and Security

Operations managers access the restricted control console via the following endpoints:

- **Primary URL:** `https://ecomxstocks.com/?admin=1` or `https://ecomxstocks.com/admin`
- **Administrative User:** `admin@devsynx.com`
- **Administrative Key:** `admin123`
- **Security Notice:** The administration portal carries strict `noindex, nofollow` robot instructions to prevent search engine caching.

3.2 Master Operational Metrics

The console overview panel continuously reports core KPIs:

- **Total Registered Members:** Gross member volume within the operational database.
- **Total Vault Liquidity:** Aggregate balance across all member accounts.
- **Pending Ingestions:** Member deposit submissions awaiting blockchain verification.
- **Pending Disbursements:** Unprocessed withdrawal requests awaiting execution.
- **Active Inventory Volume:** Total volume of product tasks published in the rotation pool.

3.3 Member Management and Data Privacy Protocols

Under the **Users and Ledgers** management module:

- **Search and Filter:** Locate records instantly by user legal name or email address.
- **Privacy Masking Protocol:** Member emails are masked by default (example: `ha***n@g***.com`) to preserve operational compliance. Authorized personnel click **Unmask Emails** to view raw records.
- **Balance and Tier Inspection:** Review current capital, assigned tier, and completed task tallies.
- **Account Operations:** Reset member passwords, credit balances directly, assign task packages, or enforce account suspension.

3.4 Verification and Approval of Member Deposits

Under the **Deposits** ledger:

1. Each pending transaction item displays Member Identity, USDT Volume, Timestamp, and submitted Transaction Hash (TxID) with an integrated hyperlink to TronScan.
2. **To Approve:** Click **Approve Deposit**. The user's ledger is credited automatically, and an immutable log entry is generated.
3. **To Reject:** Click **Reject**. The transaction status is marked void with zero balance impact.

3.5 Manual Ledger Adjustments and Promotional Credits

Under the **Finance and Manual Credit** module:

1. Select the target member profile from the directory dropdown.
2. Specify the adjustment amount in USDT.
3. Input an operational justification (example: VIP Tier Upgrade, Promotional Incentive, or Administrative Settlement).
4. Click **Credit User Wallet**. Balance adjustments reflect across user sessions immediately.

3.6 Disbursement Verification of Withdrawals

Under the **Withdrawals** management tab:

1. Inspect the member's available balance, requested payout volume, and destination TRC20 address.
2. Following external blockchain broadcast, select **Mark as Paid / Approved**.
3. If invalid details are supplied, select **Reject and Refund Balance** to restore capital to the member's wallet.

3.7 Task Inventory and Listing Configuration

The **Task Catalogue** console controls the active merchant assignment inventory.

3.7.1 Creating New Product Tasks

1. Click **+ Add New Task**.
2. Specify mandatory operational attributes:
    - **Product Title:** Commercial product name (example: Anker Soundcore Bluetooth Speaker).
    - **Marketplace Platform:** Select eBay, Walmart, or Temu.
    - **Retail Valuation (USDT):** Benchmark retail price.
    - **Commission Yield Rate (%):** Percentage yield rewarded upon completion.
    - **Deposit Barrier Threshold (USDT):** Required liquidity threshold (set to 0 for unrestricted access).
    - **Image Asset URL:** High-definition product photograph link.
    - **Learning Step Assignment:** Designate whether the task represents Step 1 through Step 25 of the curriculum.
3. Select **Save and Add to Catalogue**.

3.7.2 Modifying Active Tasks

Select **Edit** on any catalogue item to alter retail valuations, yields, collateral requirements, or visibility status (Active vs. Paused).

3.7.3 Assignment Protocols: Batch vs. Targeted Allocation

- **Batch Allocation (Quick 25 Tasks):** Select **Quick Assign 25 Random Tasks**, choose the target member, and confirm. The randomization engine balances active pool listings into the user's queue.
- **Targeted Assignment:** Select **Assign** next to any individual catalogue listing to directly inject that specific product into a chosen member's immediate queue.

3.8 Support Desk and Telecommunication Settings

Under **Support Desk Settings**, operations personnel maintain client communications:

- **Representative Name:** Display name shown in live chat (default: Ecomxstocks Official Support).
- **Greeting Script:** Automated greeting presented upon widget initialization.
- **Operating Hours:** Formal availability schedule (default: 24/7 - Mon to Sun Priority Desk).
- **Telegram Support Channel:** Official support channel URL and verified representative handle.

3.9 Audit Trail and Financial Ledger

All platform balance adjustments (order commissions, verified deposits, disbursements, administrative overrides) are registered in an immutable chronological ledger, recording Timestamp, User Identity, Transaction Category, Adjustment Amount, and Net Balance.

4.0 OPERATIONAL TROUBLESHOOTING AND FAQ

INQUIRY / SCENARIO	STANDARD OPERATIONAL RESOLUTION
Member reports Deposit Barrier Required modal during order flow.	The product order exceeds available member liquidity. The member deposits the shortfall via TRC20. Upon administrative verification, the order unlocks, and the principal deposit plus full commission returns to available balance.
Supported transfer networks for digital asset settlement.	Tether USD on the Tron TRC20 network exclusively. Other networks (ERC20, BEP20) are strictly unsupported to prevent deposit misrouting.
Procedure for quota renewal upon completion of 25 daily orders.	Access Users and Ledgers, identify the record displaying [PENDING REQUEST], select Assign Task, and execute Quick Assign 25 Random Tasks.
Adjusting commission rates or product retail valuations.	Navigate to Task Catalogue, locate the target entry, click Edit, input amended metrics, and select Save Task Changes.
Customer privacy and data protection compliance.	Email addresses remain masked across all standard views. Only verified supervisory personnel may toggle email unmasking for audit validation.

5.0 STANDARD OPERATING PROCEDURE (SOP) CADENCE

OPERATIONAL CADENCE	REQUIRED ACTION ITEM	CONSOLE MODULE
Hourly Review	Audit and verify pending member TRC20 deposits against TronScan records	Admin: Deposits Tab
Hourly Review	Inspect and authorize verified member withdrawal requests	Admin: Withdrawals Tab
Continuous Monitoring	Dispatch fresh 25-task allocations to users marked with [PENDING REQUEST]	Admin: Users and Ledgers Tab
Daily Audit	Inspect active inventory pricing, yield percentages, and barrier levels	Admin: Task Catalogue Tab
Daily Audit	Review unresolved live chat tickets and incoming Telegram inquiries	Live Desk and Telegram Drawer
